About Me / Summary

Detail-oriented SOC Analyst, Fortinet NSE 4 and NSE 6 (Security Operations) certified, with hands-on training in **24/7 alert monitoring, triage, and in-depth incident investigation** across SIEM, EDR/XDR, SOAR, and NGFW platforms. Skilled at analyzing suspicious activity, prioritizing incidents by severity, executing response playbooks, and escalating high-severity findings to DFIR specialists. Experienced in threat research and translating technical findings into clear, stakeholder-ready reports, with a Computer Engineering foundation and strong written/verbal communication.

Technical Skills

SIEM / SOAR / EDR:	IBM QRadar, Splunk, FortiSIEM, FortiSOAR, Security Onion
Network & Endpoint Defense:	FortiGate Firewalls, VPN, IDS/IPS, DLP, Web Proxy, Endpoint Security, NGFW
Methodologies:	Alert Triage, Incident Response, Digital Forensics (DFIR), Threat Hunting, Threat Research, Vulnerability Analysis, Penetration Testing, Root-Cause Analysis
Platforms:	Windows Server, Linux (Ubuntu, Kali, Red Hat), Office 365
Programming & Scripting:	Python, Java, PowerShell, Bash, SQL (Oracle, PostgreSQL), Dart
Tools & Frameworks:	Wireshark, tshark, CyberChef, Nmap, Burp Suite, Metasploit, BloodHound, Ollama, Flask, Cisco Threat Intelligence

Education

Al-Safwa Higher Institute for Engineering, Cairo, Egypt Jul 2026
Bachelor of Engineering in Computer Engineering — GPA: 3.1

Certifications

Fortinet NSE 6 – Certified in Security Operations, *Fortinet Training Institute* Oct 2026 (exp. Oct 2028)
Fortinet NSE 4 – Certified in FortiOS, *Fortinet Training Institute* Oct 2026 (exp. Oct 2028)
Vulnerability Analyst / Penetration Tester, *Digital Egypt Pioneers Program (MCIT Egypt)* May 2025
Artificial Intelligence Training Program (50 hrs), *IAO-accredited, ISO 21001* Nov 2023

Professional Experience

National Telecommunication Institute (NTI) Jul 2026 – Oct 2026
SOC Analyst Trainee (NTI Hire Ready Program)

- Monitored security events, alerts, and logs in real time across SIEM (IBM QRadar, Splunk, FortiSIEM), firewalls, and IDS/IPS to detect and triage suspicious activity by severity and impact.
- Conducted in-depth incident investigations across network, web application, and wireless attack surfaces, gathering evidence and identifying root causes through active reconnaissance and vulnerability analysis.
- Authored Incident Response Plans and automated FortiSOAR playbooks, streamlining triage and escalation workflows and reducing manual analyst workload.
- Researched emerging threats and attacker tradecraft to keep threat-intelligence inputs current for ongoing detection tuning.
- Prepared and presented incident and security-status reports as part of a capstone project spanning enterprise security architecture and stakeholder communication.

DEPI Offensive Lab Aug 2024 – Jul 2025
Red Team Training Intern

- Architected an Active Directory attack lab with 10+ virtual machines simulating enterprise environments, improving simulated threat-detection coverage by 35%.

- Executed 15+ Active Directory attack chains (Kerberoasting, AS-REP Roasting, NTLM Relay), informing detection logic and remediation of 90% of critical identity misconfigurations.
- Authored 5+ remediation reports documenting privilege-escalation paths and root causes, reducing response times by 40%.
- Performed payload analysis using Java and PowerShell during incident-response simulations to identify DLP weaknesses.

SOC Investigation Case Studies (Training)

NetSupport RAT Deployment — Malware Intrusion Investigation

- Investigated a fake-browser-update lure leading to manual execution of a trojanized installer; traced Inno Setup-wrapped extraction of a custom DLL loader and RAT payload to the temp directory.
- Identified evasion via Position-Independent Code and Process Hollowing injected into legitimate processes, and uncovered registry-based persistence.
- Analyzed C2 traffic disguised as cleartext HTTP over port 443 to bypass perimeter firewalls; correlated TTPs to Babar espionage tooling for attribution.

Concurrent Formbook & TeamViewer RAT Intrusion Analysis

- Triaged two independent, concurrent intrusions (Dec 2017): a Formbook credential stealer delivered via a spoofed freight-invoice phishing email, and a TeamViewer RAT dropped through a Black Friday-themed weaponized Word document.
- Compared delivery mechanisms, persistence (registry keys vs. scheduled tasks), C2 protocols (HTTP POST decoy domains vs. TCP/5938 beaconing), and exfiltration artifacts side-by-side to determine root cause and scope for each host.

"ARP Storm" — Network Forensics Investigation (CTF)

- Investigated an ARP-spoofing Man-in-the-Middle attack in which the adversary impersonated the network gateway to intercept traffic.
- Detected data exfiltration via non-standard opcodes embedded in ARP packets; used `tshark` to extract malicious field values and CyberChef to reconstruct and decode the exfiltrated Base64 payload.
- Documented the full evidence chain from packet capture to decoded artifact, demonstrating exfiltration techniques that abuse core network protocol fields.

Projects

GhostSec RedTeam Framework Jan 2024 – May 2024

- Developed a framework mapping automated attack paths across Windows and Linux environments, improving adversary-simulation efficiency by 25%.
- Led offensive assessments evaluating VPN security and identifying IDS/IPS implementation gaps.

Thoutha Dental Case Connection System Sep 2023 – Jun 2024

- Led development of a Flask platform with Oracle SQL and an AI-powered intake engine, securely processing 500+ simulated clinical matches with 99% uptime.
- Engineered secure authentication and Office 365 integration to protect patient information.

WiFizzle-DDoS Mar 2024 – Apr 2024

- Developed Python and Bash automation tools for wireless security assessments and handshake capture using Aircrack-ng, identifying 15+ access point vulnerabilities.

Windows Explorer Logger Nov 2023 – Dec 2023

- Developed a Python-based host monitoring tool for forensic investigations, reducing telemetry analysis time by 30%.

CTF Experience & Competitions

- **Cyber Champions CTF (ZinadIT)** — Aug 2024: Collaborated in a team environment to solve live cybersecurity challenges through rapid analysis and offensive security techniques.
- **TryHackMe & Hack The Box** — Jan 2023 – Present: Ranked Global Top 3% on TryHackMe with 15,447 points. Specialized in Digital Forensics on Hack The Box, capturing three critical flags and earning 2,700+ points.
